

Stainless Steel SprayCabinet

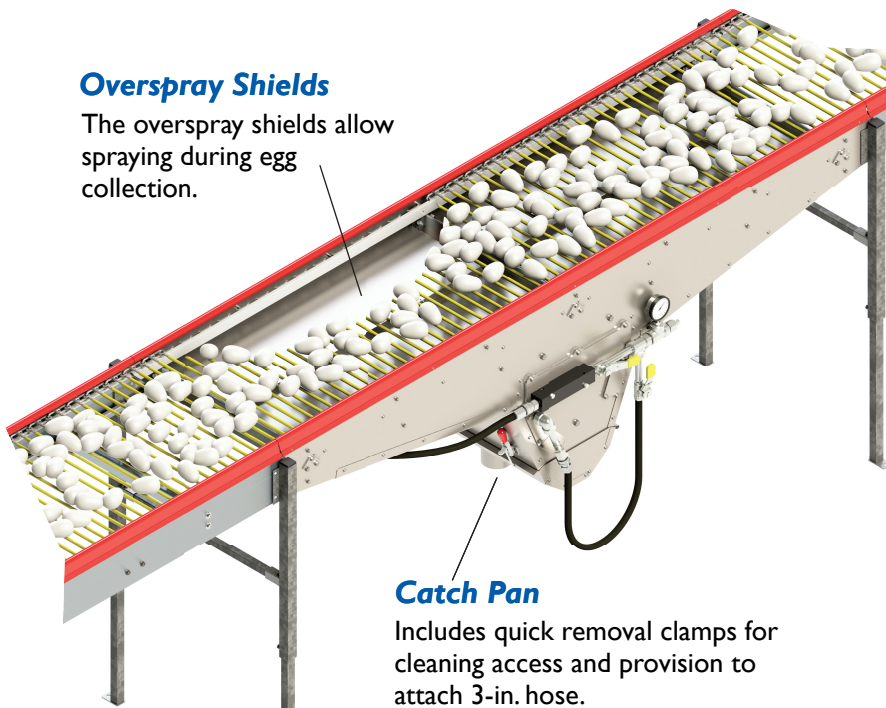

Like a carwash for your conveyor chain.

With the increasing concerns over biosecurity and disease control, the all-new **Lubing SprayCabinet System** is an excellent addition to any layer operation.

High-pressure spray nozzles in the enclosed cabinet safely spray the lower chain of the conveyor. The SprayCabinet can safely be operated during egg collection, saving time during wash-down. Complete details can be found on our website at www.lubingusa.com in the "What's New" section.

Overspray Shields

The overspray shields allow spraying during egg collection.

Catch Pan

Includes quick removal clamps for cleaning access and provision to attach 3-in. hose.

High-Pressure Electric Mobile Pump

One pump can service multiple SprayCabinets.

Mounted on wheels for mobility.

All quick-connect water connections.

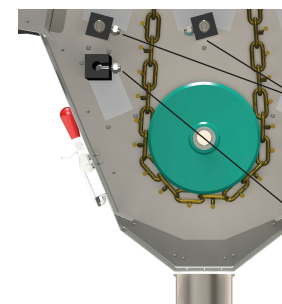

Available in 230/460V, 3ph plug-in motors.

Adjustable water pressure.

Chemical injector for cleaning/disinfecting agents helps sanitize for AI or Salmonella.

Spray Headers

One spray header for cross-rods. One spray header for chain links with valves to run both or one at a time.

Chain Link Nozzles
Eliminate possibility of oil marks on eggs

Cross-Rod Nozzles

- Available in all conveyor sizes.
- All hoses are quick-connect.
- All interior surfaces are sloped for drainage.
- All stainless and food-grade plastic construction on contact surfaces.
- 2m SprayCabinet can easily be retrofitted onto existing systems.
- Can be mounted on legs or suspended.
- Can be installed on inclines/declines up to 10 degrees.
- Helps reduce number of dirty eggs.
