COMFORT PERCH
COMFORT PERCHING SYSTEM

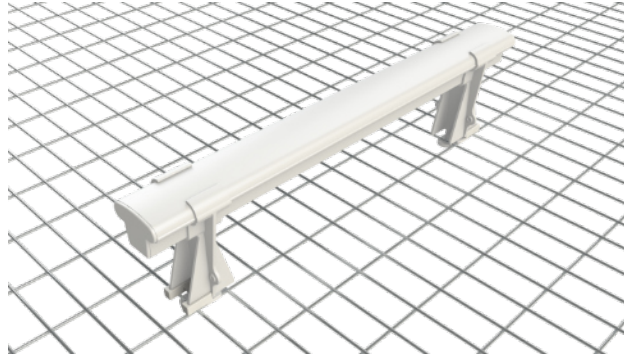

RELENTLESS QUALITY. EXCEPTIONAL SERVICE.

Our Comfort Perch system is a unique product that offers noticeable results. The Comfort Perch is ergonomically designed to offer the most pad contact and comfort to the birds while perching.

Perch system on plastic slats

The mushroom perch design fits the contour of the bird's paws and allows the birds to grip the perch without working to keep their balance as they do on round perches. This design has been proven to significantly reduce bird stress and result in higher production with lower mortality.

Perch system on wire mesh

Our Comfort Perch systems can be installed on plastic slats or wire mesh and can also be easily retrofitted onto any existing system. Installation is simple and does not require the use of nuts, bolts, rings or clips.

Easy to install on new systems or retrofit in cages
